Poster Expectations
Due Date: October 2, 2014

Your poster should be designed in google docs or a related document/poster-making program.
The finished product should be typed and include the following:

Title:
Your poster should include a clever and catchy title that grabs the attention of the reader yet remains school appropriate. It should be typed in an easy to read font no smaller than 24.

Picture(s):
Your picture(s) should support the pollution causing problem you chose from the article we discussed in class. Pictures should be printed in color and be large enough for people to see from 1 to 2 meters away.

Problem:
Your poster should educate people about the dangers of pollution. You should choose ONE problem from the “Pointless Personal Pollution” article that we discussed in class and clearly explain why it is a problem. This section should be about 20-40 words in a font size large enough to view from 1 to 2 meters away.

Solution:
You should offer a solution to the problem. Your solution should be based on the article or web-related material identified in class. This section should be about 20-40 words in a font size large enough to view from 1 to 2 meters away.

***Don’t forget to include your name somewhere on the poster. I usually suggest students put their names on the bottom right-hand corner of the page so it is separate from the content area of your poster.

*please see me with any questions or concerns prior to the due date listed above
